

Smooth Line
REMOVABLE HARD TOPS

350ZR

Sneak Preview (Prototype Photos)

The 350ZR removable hardtop by Smooth Line is getting close to production and the results are even better than expected. Enhanced looks, performance and comfort are now available for your ZR. These are photos of our prototype which is shown without rain guards and weather seals and is finished in a flat primer coating. The rear brake light will be visible through the window. It is the exact concept of our coming production ZR hardtop. When finished in the matching body color your Z roadster will transform into a completely new coupe and will turn heads of enthusiasts and car lovers.

It will be manufactured as a fiberglass composite and is estimated to be 40# or less but super strong. Initial installation will be relatively simple and the normal on/off process (latching and delatching) will be easy and fast. Simply lower the convertible top in the normal position, lift the hardtop in position and latch. Very easy and requires only minutes. No tools will be required. The interior will be completely upholstered in a choice of sound deadening headliners in a variety of colors.

Everything is included: latches, soft rubber weather seals, exterior rain guards and rear window to insure a "factory" look, fit and finish.
