	Engine oil pressure warning light		Cruise set switch indicator light (if so equipped)		Turn signal/hazard indicator lights
	Low tire pressure warning light (if so equipped)		High beam indicator light (Blue)		

CHECKING BULBS

Apply the parking brake and turn the ignition key to ON without starting the engine. The following lights will come on:

The following lights come on briefly and then go off:

If any light fails to come on, it may indicate a burned-out bulb or an open circuit in the elec-

trical system. Have the system repaired promptly.

WARNING LIGHTS

 or  Anti-lock brake warning light

When the ignition switch is turned to the ON position, the anti-lock brake warning light will illuminate and then turn off. This indicates the anti-lock brake system (ABS) is operational.

If the light comes on while the engine is running,

it may indicate the anti-lock brake system is not functioning properly. Have the system checked by your NISSAN dealer.

If a malfunction occurs in the system, the anti-lock function of the brake will cease operation but the ordinary brakes will continue to operate. See “Anti-lock brake system (ABS)” in the “5. Starting and driving” section for further details.

If the light comes on while you are driving, contact your NISSAN dealer for repair.
